My Projects & My Design Philosophy

My Projects :

1. **My Portfolio Website**
2. **University Website**
3. **SEO Website**
4. **Laundry Website**

My Design Philosophy :

- I designed and built my own **Portfolio Website, University Website, SEO Website** and **Laundry Website** using **HTML 5, CSS 3, JavaScript ES6** and **Bootstrap 5**. I had used Semantic HTML elements and I made these websites responsive for Desktop, Tablet and Mobile view by using Flex box, Media queries and Bootstrap Grid System.
- I optimize my websites using Semantic HTML tags to prepare the content for better machine readability and to improve Webpage SEO.
- My approach to website design is to create a website that strengthens company's brand while ensuring ease of use and simplicity for audience. Simplicity is one of the golden rules of website design. The audience should have an enjoyable, positive experience when using website. Whether their objective is reading content, watching a video or enrolling in a course, every action should be clear and concise throughout the website.
- The Website development process starts by taking the graphical elements (colours, fonts, layout, images) defined in the design process and coding them using web industry standards (HTML5, CSS3, JS) This is typically done by first coding the home page, followed by templates for the interior pages.
- I build Responsive websites for an optimal user experience. Having a responsive layout means that website fluidly resizes for optimal viewing regardless of the screen size or device (desktop computer, laptop, tablet or smart phone). This ensures ease of use and a better audience experience without the need for panning, scrolling or resizing. Audience is much more likely to enjoy viewing website on a mobile device without needing to zoom in to read the text or to find the navigation menu.
